

Exquisite Heat®

US Patent 6,402,043

Exquisite Heat provides Intelligent control for Heating & Cooling

equipment for more even comfort, reduced air pollution and 10-20% energy savings.

Computer control allows heating & cooling systems to adjust system output to the exact heat replacement or removal needs of homes & buildings.

Once set folks enjoy efficiency and comfort never before imagined.

Saves fuel.

Controls Hot water, Steam, HVAC, hot and cold Air.

Exquisite Heat pays for itself in less than 2 years. That is a 50% annual return on investment, for as long as you own the building.

Exquisite Heat adjusts automatically every minute to the precise needs of your building or home.

Saving on **energy and air pollution** in the coming years is a top priority for the nation. Combined with sound engineering and efficient operating systems Exquisite Heat can save 10-20% and more of electricity, gas or oil, and increase comfort for building occupants.

Exquisite Heat is a unique patented process at a reasonable cost, for your heating and cooling system. We can help make newer and older systems run more smoothly, and more efficiently.

Our one year money back, no questions guarantee program is second to none, and the savings over expense make this system a cash positive profit center for your budget for many years to come. Reduced operating expense means less fuel, less air pollution, and more **even comfort** for all occupants.

Our five year control warrantee, assures system reliability. Annual service visits are recommended for reliability assurance. We can provide you with one of our local factory certified contractors.

System pay back time is one to two years.

You continue to earn those savings for

Saving fuel, every hour of the day.

Energy Costs are on the way up.

You can save energy from day one with:

Exquisite Heat®

Technology that pays for itself in less than two years.

What can you do now to save Energy and Greenhouse gases?

Let modern computer technology run your Heating & Cooling System more efficiently and more comfortably.

Exquisite Heat reduces dependence on expensive fuels reducing **chimney exhaust** pollutants from being added to the atmosphere.

Exquisite Heat technology makes structures **more comfortable** for occupants, with **more even** and more accurate temperature delivery.

It is exquisite because it adjusts your system precisely every minute of the day to provide the **exact replacement** of energy loss or gain from your home or building, under changing conditions from your thermostat. Outdoor reset technologies can not do this as well. Exquisite Heat is **compatible** with all existing **new or old equipment**.

US Patent 6,402,043

The changing of the Seasons

Seasons change from cool to warm, from hot to cold. Heating and cooling systems do not know this seasonal change is happening. Systems are set to be prepared to satisfy comfort needs under the most **extreme** climate conditions.

Exquisite Heat technology is a new modulating operating philosophy which provides **even comfort and reduced energy use**.

No need for extremes

In the past you could be warm on the coldest days and you felt, " Golly aren't we lucky to have a good heating system". But remember those cool days when the system gave you uneven or extreme temperatures. That's because your system is tuned for the coldest or warmest days of the year. Exquisite Heat technology can give you and your family just the right temperature you need to feel **"just right"**. That reduces the need to waste energy for your Home or Multi family building. Your thermostat alone can not do this.

It pays for itself in less than two years.

Find the pictures of the many types of buildings we control for happy managers and happy residents at.

What to do?

Decide your responsibility to do something about your Green Action Plan. The process is a chain of actions that you can do.

Have an energy audit from New York State Energy Research Development Authority. Go to the NYSERDA website. They will connect you with an auditor. These folks will show you where the leaks are in your house and how to correct them. It will cost a few dollars. You will get the money back from the state when you do some of the work. Plan on following their direction in a planned, phased, budgeted way. Do it now. It is a new program and they are waiting for your call.

Ask yourself whether you could reduce the gas mileage on your automobiles. It is a mindset. Are you ready?

Are you recycling: That means reduction, reuse, and trash separation. It feels good once you do it. Most of life is moving stuff from one place to another.

Are you really conscious of your use of water. That is becoming the crisis of the century in many areas of the world. Reducing our water use is really easy when you think about it.

Be careful not to let the water run in the bathroom or kitchen if it is not being used. Think of it like pennies down the drain.

Time your time in the shower. You are burning energy regenerating the hot water.

Do you have a rain sensor on your lawn sprinkler system? Talk about feeling better. How many times do you see systems running when it has just rained.

Do you make a fire inspection of your home regularly?

Install smoke detectors in every bedroom, hallway on every floor. Change the batteries.

Take you unneeded pesticides, and paint cans to a County clean-up day. Go to West-
